□ CampusBrief —Product Brief / 产品简介

Turn long campus briefs into actionable plans in seconds. / 将冗长的校园任务简报转换为可操作的计划，只需几秒钟。

An AI tool built exclusively for university students worldwide / 一款专为全球高校学生打造的 *AI* 效率工具

□ A ·Problem Statement / 问题陈述

Students regularly face long, unstructured briefs —including academic assignments, term papers, graduation theses, group research projects, student organization work, internship tasks, official administrative guidelines, and formal notice emails —but struggle to identify **what to do first**. / 学生经常面对冗长、无结构的说明内容——包括学术作业、学期论文、毕业论文、小组科研项目、学生组织工作、实习任务、官方制度指南以及正式通知邮件——但难以确定**首先做什么**。

This typically occurs under time pressure, where students must quickly extract: / 这通常发生在时间压力下，学生必须快速提取：

- deliverables / 交付物
- deadlines / 截止日期
- key requirements / 关键要求

However, important details are often buried in dense text. / 然而，重要细节往往埋藏在密集的文本中。

□ **Consequences / 后果：**

- Misunderstood requirements / 误解要求
- Missed deadlines / 错过截止日期
- Inefficient team coordination / 团队协调低效
- Delayed task progress / 任务进度延迟

□ B ·Solution / 解决方案

CampusBrief transforms any brief into a structured Action Card —focused on execution, not just understanding. / CampusBrief 将任何简报转换为结构化的行动卡——专注于执行，而不仅仅是理解。

□ Core Capabilities / 核心能力

- **Structured Extraction / 结构化提取**
  Extracts requirements, deadlines, deliverables, and constraints / 提取要求、截止日期、交付物和约束
- **Action Planning / 行动规划**
  Generates step-by-step execution flow / 生成逐步执行流程
  → First → Next → Final / → 首先 → 接下来 → 最后
- **Risk Detection / 风险检测**
  Surfaces missing or unclear information / 突出缺失或不明确的信息

□ User Flow / 用户流程

Paste / Upload Brief / 粘贴/上传简报

NOTE： CampusBrief automatically classifies campus tasks into Competition and Assignment based on scenario complexity, deliverable types, and collaboration models, applying tailored extraction strategies: competition mode focuses on team rules, multi-stage deadlines, and judging criteria, while assignment mode prioritizes course requirements, submission formats, and single deadlines. / CampusBrief 会根据场景复杂度、交付物类型与协作模式，将校园任务自动分为竞赛类与作业类，并采用针对性提取策略：竞赛模式侧重团队规则、多阶段截止日期与评审标准，作业模式则优先提取课程要求、提交格式与单一截止日期。

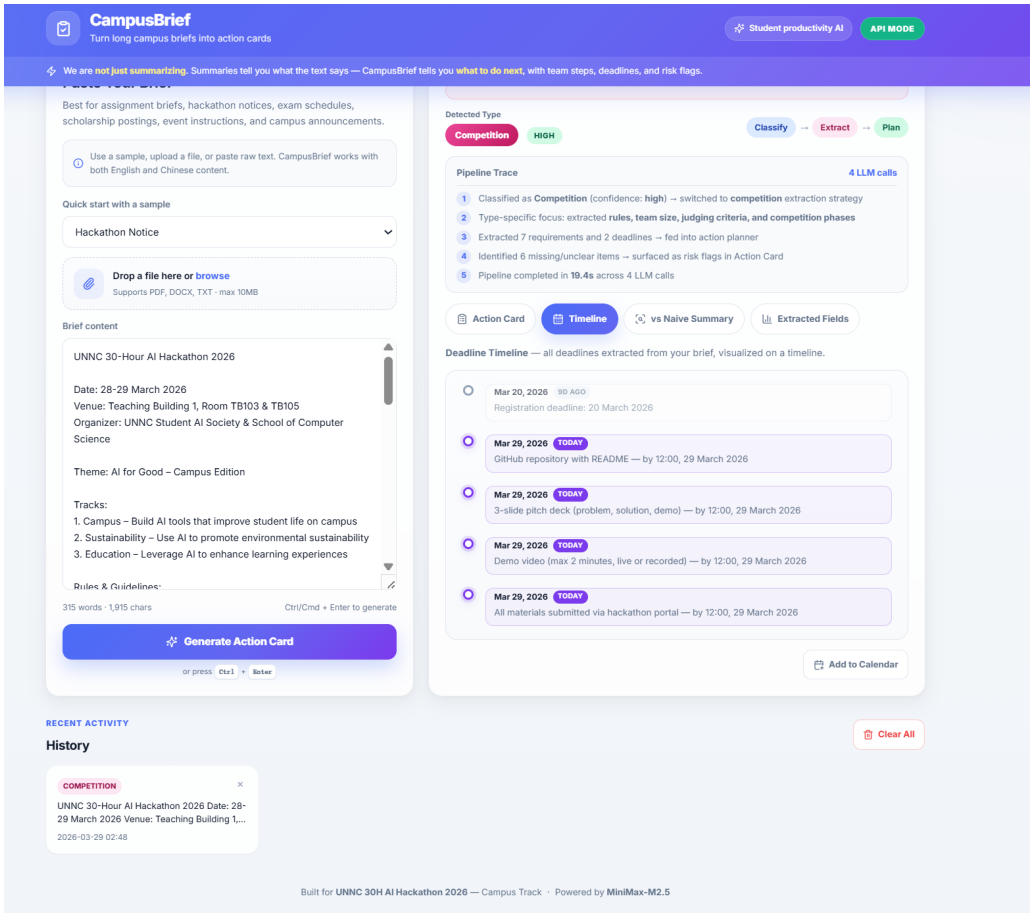

Figure 3: CampusBrief timeline view demo / CampusBrief 时间线视图界面

□ C ·Target Users / 目标用户

□ Primary User / 主要用户

Students in: / 学生群体：

- Students frequently working with written instructions and task-based requirements / 经常处理书面任务说明和要求类文档的学生
- Tasks involving coordination, deadlines, or deliverables (e.g., coursework, academic research, student events, internships) / 涉及协作、截止时间或交付物的任务（如课程作业、学术科研、学生活动、实习）
- Time-constrained environments / 时间受限的场景

□ Usage Scenario / 使用场景

A student receives a multi-page task brief containing multiple requirements, deadlines, and constraints. / 一名学生收到一份包含多项要求、截止时间和约束的多页任务说明。

Instead of manually reading and extracting key information, they upload it into CampusBrief. / 他们不再手动阅读并提取关键信息，而是将其上传到 CampusBrief。

Within seconds, they get: / 几秒钟内，他们得到：

- Clear deliverables / 清晰的交付物
- Exact deadlines / 确切的截止日期
- Action steps / 行动步骤
- Risk warnings / 风险警告

□ They can start working immediately instead of spending time figuring out the task. / □ 他们可以立即开始推进工作，而不是花时间梳理任务本身。

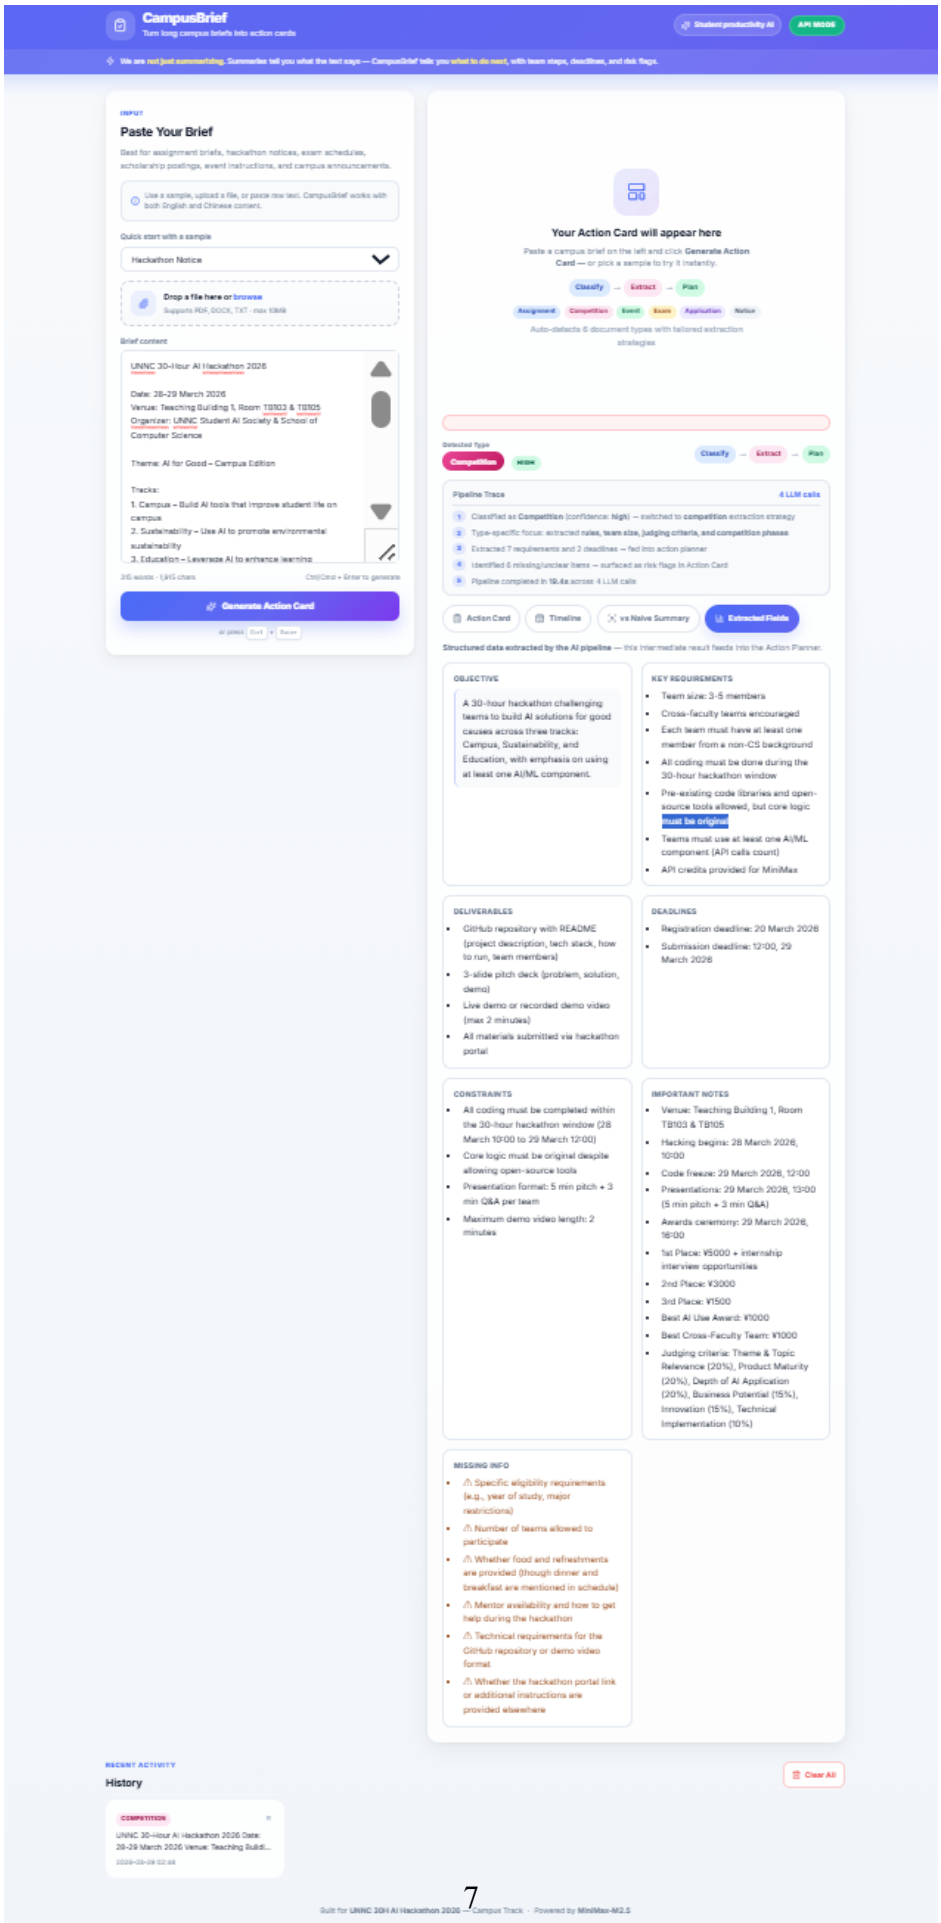

Figure 4: CampusBrief extracted-fields demo / CampusBrief 结构化字段界面

□ D ·Core Value Proposition / 核心价值主张

For students working with complex briefs, CampusBrief turns unstructured text into actionable plans, so they can start immediately —unlike manual reading or generic summaries.
对于处理复杂简报的学生，CampusBrief 将无结构文本转换为可操作计划，让他们可以立即启动工作——不像手动阅读或通用摘要工具。

Why it matters / 核心价值

- Reduces cognitive load / 降低认知负荷
- Eliminates ambiguity / 消除歧义
- Speeds up execution / 加快执行节奏
- Improves team alignment / 提升团队协作一致性

□ E ·AI & Technical Approach / AI 与技术方法

□ Models & Methods / 模型与方法

- Large Language Model (LLM) / 大型语言模型 (LLM)
- Prompt-based extraction optimized for campus scenarios / 针对校园场景优化的基于提示词的提取能力
- Multi-step reasoning pipeline / 多步推理流水线

□ 3-Step AI Pipeline / 3 步 AI 流水线

Step / 步骤	Function / 功能
Classify / 分类	Identify task type (assignment / research / event / internship / notice) / 识别任务类型（作业 / 科研 / 活动 / 实习 / 通知）
Extract / 提取	Pull structured data (requirements, deadlines, etc.) / 提取结构化数据（要求、截止日期等）
Plan / 规划	Generate execution steps and risk flags / 生成执行步骤和风险标志

□ Why AI? / 为什么使用 AI?

Campus brief is: / Campus brief 具备以下特性：

- Unstructured / 无结构的
- Diverse in format / 格式多样
- Context-heavy / 上下文丰富

□ Rule-based systems are not reliable enough for this kind of input. / □ 基于规则的系统对这种输入不够可靠。

LLMs can: / LLM 可以实现：

- Understand context / 理解上下文
- Extract core meaning / 提取核心含义
- Generate consistent structured outputs / 生成统一的结构化输出

□ F ·Key Assumptions / 关键假设

1. Structural Validity Assumption / 结构有效性假设

We assume standard campus briefs contain enough implicit structure for AI to extract meaningful information. / 我们假设标准的校园任务简报包含足够的隐含结构，可供 AI 提取有意义的信息。

2. User Preference Assumption / 用户偏好假设

We assume students prefer structured action plans over raw text or generic summaries. / 我们假设学生更喜欢结构化行动计划，而非原始文本或通用摘要。

3. Accuracy Sufficiency Assumption / 准确性充足假设

We assume AI-generated plans are sufficient for reliable initial execution guidance. / 我们假设 AI 生成的计划足以提供可靠的初始执行指导。

□ G ·Differentiation / 差异化

Current Alternatives / 当前替代方案

- Manual reading + note-taking / 手动阅读 + 记笔记
- Generic AI summaries / 通用 AI 摘要
- Chat-based Q&A tools / 基于聊天的问答工具

□ What Makes CampusBrief Different / 核心差异化优势

Feature / 特性	Traditional Tools / 传统工具	CampusBrief
Output / 输出	Summary text / 摘要文本	Action Card / 行动卡
Focus / 重点	Understanding / 理解	Execution / 执行
Deadlines / 截止日期	Hidden / 隐藏	Explicit / 明确可视化
Guidance / 指导	None / 无	Step-by-step / 逐步执行指引
Risk detection / 风险检测	No	Yes

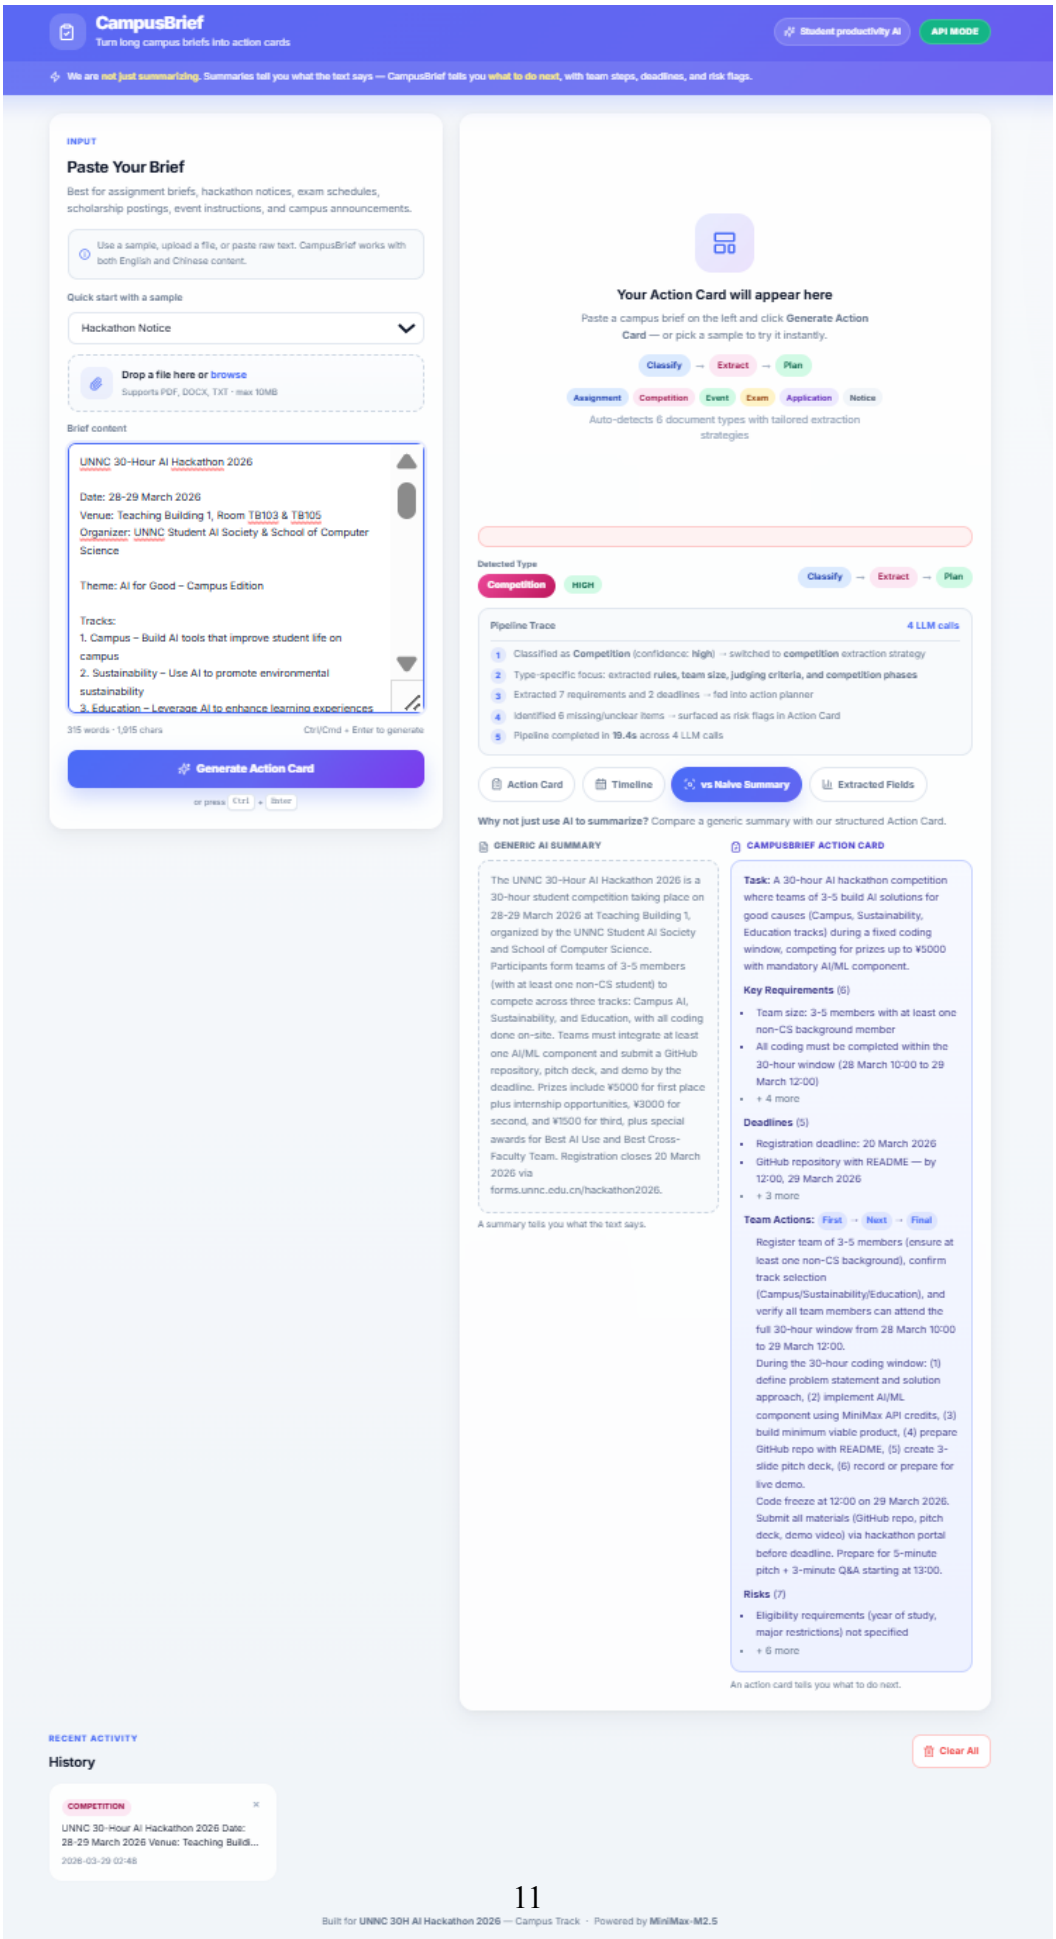

Figure 5: CampusBrief vs Generic Summary / CampusBrief 与一般总结对比
